Embodied Fantasies, a concept central to art history, theory and practice is concurrently a topic debated in the fields of the neuro-and-cognitive sciences, philosophy and phenomenology. This theme will be addressed in a transdisciplinary conference hosting scholars and artists from the fields of architecture, art history, visual art, history of science and psychology among others. Discussions will focus on concepts of embodiment as they relate to sexuality, aesthetics, epistemology, perception and fantasy itself. Approaches to the role of fantasies will be viewed beyond traditional conceptions to include complex thinking processes, subjectivity, and the inter-subjective. Prominent attention will be paid to fantasies and images as a form of knowledge production.

Staging Nature (From the Untouched to the Untouchable)

Prompted in 2004 by a string of natural disasters and the on-going media focus on global warming, I turned my attention to developing a second "look" at nature with the hopes of better understanding how we perceive and encounter it today.

The scientific discoveries of the Renaissance that revolutionized our understanding of the shape and location of our planet in the solar system also dramatically altered our path of development in science and society. In the centuries to follow these advances in science eased our fear of the sublime horror of nature, and with new technology the expansion and progress of mankind is seemingly everlasting. Artists well aware of this fact created a romantic landscape ideal, with a sublime outlook on nature, telling the tale of destruction and problems ahead of us. This landscape ideal is burned into our subconscious and is utilized by a range of actors attempting

to attract your attention, money, patronage, etc.

Where previously nature had been within the realm of the philosophical, it ultimately fell under the purview of science. This shift seems to have suspended any update of our own responsibilities in living and dealing with nature. As long as nature was viewed as belonging to the realm of science it could only be scrutinized and understood under the microscopes of scientists. While science has enabled a tremendous change in society and managing our world, it also has brought many problems to this seemingly ever expanding need of resources in order to maintain and run this machine. Only in recent history we have changed this paradigm on how to look on nature, a discussion which is still in an ongoing struggle.

In 1968, there was yet another shift in imagery and technology. The Apollo Missions transmitted the first pictures back to the earth with the blue planet floating in the universe. We were once again back in the focus of the camera; we were once again the center. This shift along with information technology seemed to boost the renaissance society's understanding of the self, to a full circle. The single person is now the central node of communication with others. The surrounding realm of social reality is slowly disappearing on a computer hard-drive or stored in cyberspace ready to be shared with the world.

"Staging Nature" will present my artwork and related research, which aims to provide a new reflection and examination of our western landscape ideal, some of which only exist in our blurred memory, but overrides our day-to-day perception. It seems this longing for the sublime landscape and the sublime horror of natural disasters has doubled in our reality and created a man made sublime places, as well a man made sublime dystopian landscape horrors. Advertising and media are well aware of that fact and use those fantasies to sell us more fantasies.
